

# Error Log

```
18 // Display prime numbers between the two numbers
19 System.out.println("Prime numbers between " + start + " and " + end + ":");
20 for (int i = start; i <= end; i++) {
21     if (isPrime(i)) {
22         System.out.println(i);
23     }
24 }
25
26 scanner.close();
27 }
```

On line 20 I had not added a second + symbol, resulting in an error.  
For the fix I just added the symbol into the code.

```
18 // Display prime numbers between the two numbers
19 System.out.println("Prime numbers between " + start + " and " + end + ":");
20 for (int i = start; i <= end; i++) {
21     if (isPrime(i)) {
22         System.out.println(i);
23     }
24 }
25
26 scanner.close();
27 }
```

```
11 // Prompt the user for two numbers
12 System.out.print("Enter the first number: ");
13 int start = scanner.nextInt();
14
```

On line 13 I had forgotten to add a semicolon, which produced a error, for the fix I put it at the end of line 13.

```
11 // Prompt the user for two numbers
12 System.out.print("Enter the first number: ");
13 int start = scanner.nextInt();
14
```
